Private Smart Contracts on Bitcoin

Bitcoin-native Tokenization Infrastructure and Applications.

BACKED BY

Draper Associates

Waterdrip Capital

Actai Ventures

Martial Eagle Fund

Fulgur Ventures

"Tim Draper backed DIBA at inception — the same instinct that led him to Bitcoin at \$6."

DRAPER ASSOCIATES · LEAD INVESTOR

The Opportunity

Global capital markets run on archaic infrastructure.

\$867T

LEGACY VOLUME

- Global scale assets tied up in legacy clearing houses (DTCC, SWIFT, and Euroclear).
- Inefficient operations caused by settlement delays and third parties.

93%

GEO-LIMITED MARKET

- 93% of high yield institutional investment products are geographically siloed.
- Institutional capital faces insurmountable first-principle technical barriers to accessing lucrative global emerging markets.

\$17B⁺

MIDDLE AND BACK OFFICE OVERHEAD

- Capital lost annually to post-trade, custodian, and compliance costs.
- Driven entirely by legacy manual operations and outdated systems.

T+0

ATOMIC SETTLEMENT

Onchain issuance brings radical transparency to capital markets. T+0 atomic settlement with native USDT on **Bitcoin** rails means assets and cash move simultaneously.

THESIS

Every asset class will migrate to blockchain rails. The question is not if, but which chain captures institutional trust. We are betting that **Bitcoin** is the obvious answer for capital markets.

What's different with **Bitcoin**

Three converging forces make **Bitcoin** the inevitable settlement layer for institutional assets.

PROGRAMMABILITY

Taproot & **RGB**

The **Bitcoin** network is now fully programmable. Client-side validation enables protocols to run expressive smart contracts directly onchain.

ADOPTION

Institutional Inflow

\$100B+ AUM in **Bitcoin** ETFs. BlackRock, Fidelity, and sovereign wealth funds now hold BTC. The demand for on-chain asset infrastructure is following suit.

SOVEREIGN INTEREST

The Nation-State

El Salvador, UAE, and African nations are actively exploring **Bitcoin** asset registries. Sovereign demand for neutral settlement infrastructure is accelerating rapidly.

15+ YEARS
ZERO DOWNTIME
UNBROKEN SECURITY

THE FIDUCIARY STANDARD

Bitcoin is the **only** blockchain with fifteen years of unbroken security, zero downtime, and universal regulatory recognition.

For institutions managing fiduciary assets and sovereign entities securing national infrastructure, **this foundational reliability is non-negotiable.**

Capital Markets Stack

A full-stack ecosystem for Bitcoin-native financial assets.

ASSET LAYER

BitMask

Non-custodial institutional wallet. Self-sovereign key management, atomic swaps, and multi-signature governance.

MARKET LAYER

DIBA

Decentralized marketplace for tokenized securities. Primary issuance and secondary trading, with compliance at the protocol level.

STORAGE LAYER

Carbonado

Bitcoin's encrypted data availability layer. An open-source protocol analogous to IPFS, secured in strategic partnership with Hut8 (NASDAQ: HUT).

SETTLEMENT LAYER

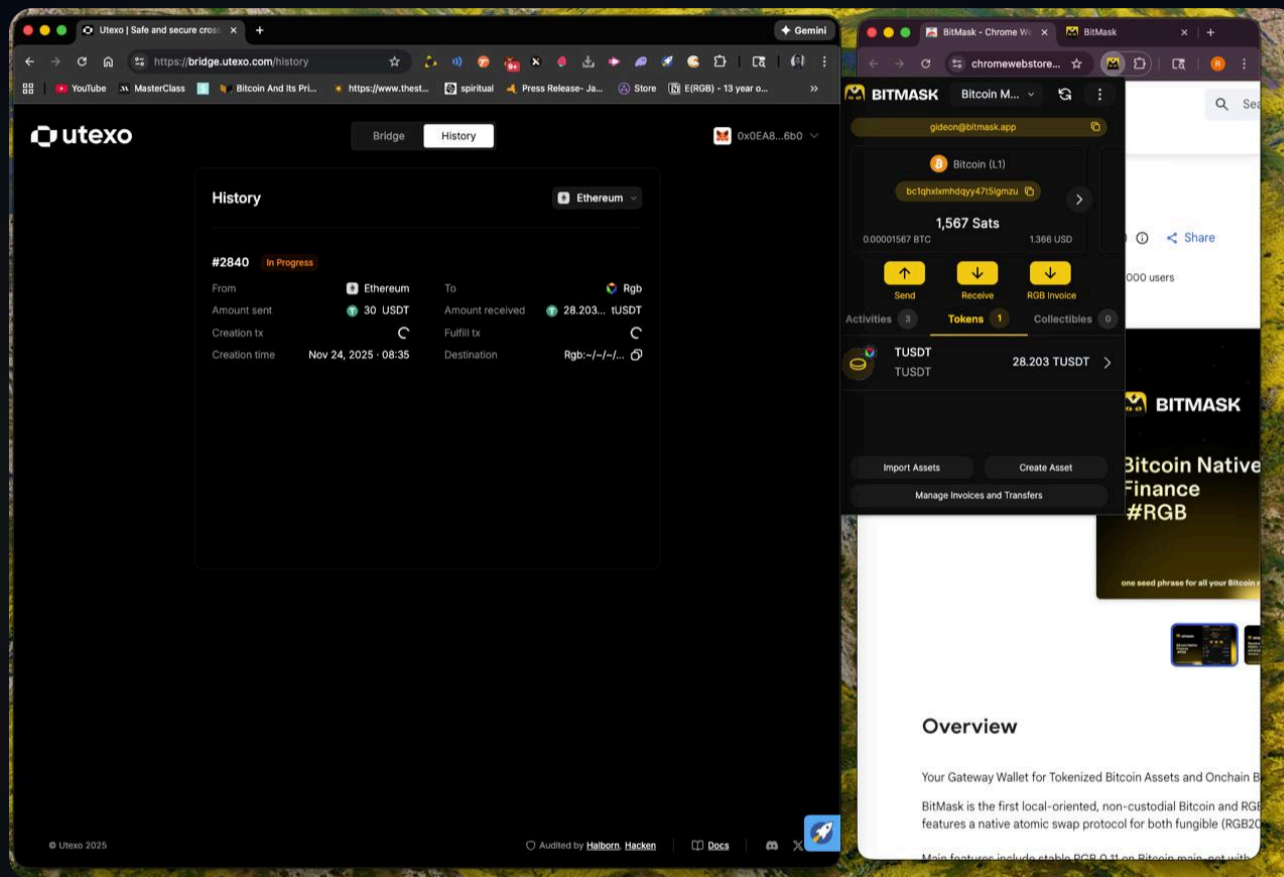

RGB Engine

Private smart contract infrastructure cryptographically anchored to Bitcoin PoW. Client-side validation with zero-knowledge partial disclosure.

ECOSYSTEM MOAT

DIBA owns and provides an end-to-end, fully integrated technology stack.

● **\$USDT ON BITCOIN** via UTEXO's POC

— BITMASK WALLET

The Bitcoin Swiss Army Knife

The first non-custodial wallet & Chrome extension for **Bitcoin**, Lightning, and **RGB** assets. Built in Rust, compiled to WebAssembly, with Client-side Validation at the core.

Scriptless Atomic Swaps

Trustless, peer-to-peer exchange of **Bitcoin** and digital assets. **No intermediaries. No counterparty risk. Private Assets.**

Agentic **Bitcoin** Finance

Custom privacy-focused MCP connecting AI agents autonomously to sovereign **Bitcoin**-native markets.

Global Community

Backed by core **RGB** protocol contributors, developers, and 60k+ followers worldwide.

REVENUE ARR

Onchain **Bitcoin** Marketplace *for All Assets*

DIBA (Digital **Bitcoin** Assets) is the primary venue for discovering, issuing, and trading compliant assets on **Bitcoin**.

Early POCs || **RGB21**

World's first true smart-contract marketplace on **Bitcoin**. Atomic execution frameworks for high-value artwork and digital collectibles.

Institutional Products

Private tokenization infrastructure and institutional SDKs. Equipping smart investors with the tools to issue, manage, and privately reconcile compliant digital assets on **Bitcoin**.

BitMask Institutional

Custody, compliance, and seamless asset lifecycle management for regulated entities.

Core Architecture

- ✓ **Non-custodial Key Sovereignty**
Institutional-grade key management with zero third-party risk.
- ✓ **Onchain Atomic Swaps**
Trustless, immediate peer-to-peer confidential settlement for trading on **Bitcoin**
- ✓ **Client-side Validation**
Private state and local computation for absolute privacy.

Compliance Rails

- ✓ **Selective Disclosure & ZK-Proofs**
Share only what regulators require with verifiable transaction proofs.
- ✓ **Multi-Sig & Access Controls**
Enterprise-grade governance distributed across multiple stakeholders.
- ✓ **Audit Trails & KYC/AML**
Cryptographic tracking with modular plug-in compliance middleware.

Rust + WASM
CORE ENGINE

100%
PROPRIETARY STACK

Bitcoin-Native Yield
First-mover advantage in tokenizing cash-flow generating assets globally on **Bitcoin**.

Competitive Moat

The only full-stack sovereign infrastructure for Bitcoin capital markets.

PROTOCOL CONTROL

RGB Founding Member

DIBA is setting the global standard for **Bitcoin** smart contracts. Our team consists of the core contributors actively architecting the base protocol.

VERTICAL INTEGRATION

Full-Stack Ownership

Wallet + Marketplace + Storage + Settlement. Limited dependency on third-party middleware.

SOVEREIGN PIPELINE

Government Pilots

Strategic pipeline of ongoing institutional engagements. Developing the foundational trust required to establish deep, unassailable regulatory moats.

CAPABILITY	BITMASK / RGB	ETH L2S	STACKS	LIQUID	ORDINALS
Bitcoin-Native Security	✓	×	~	~	✓
Turing Complete Smart Contracts	✓	✓	~	×	×
Privacy by Default	✓	×	×	✓	×
Zero MEV Attacks	✓	×	×	✓	✓
Ideal Regulatory Compliance	✓	~	×	×	×
Lightning Network Compatible	✓	×	×	~	×
Institutional Wallet	✓	✓	×	×	×

WHY NOW: THE BITMASK DIFFERENTIATOR

The institutional tokenization window has opened. BitMask and the **RGB** protocol offer the **only** full-stack solution that guarantees **Bitcoin**-native security, smart contract flexibility, and absolute MEV resistance.

Traction & Milestones

Establishing category leadership in the Bitcoin smart contract era.

2021

First Mover

Built the world's first marketplace for private digital assets on **Bitcoin** via **RGB**.

2022

Hut8 JV

Joint venture with Hut8 (NASDAQ: HUT) to solve data availability for **Bitcoin**.

2023

Protocol Core

Founding member of **RGB** Association.
Core contributors to smart contract standards.

2025-26

Sovereign Pilots

Ongoing strategic engagements exploring the tokenization of national asset registries using our institutional infrastructure.

Strategic Partnerships

Validated by the institutions building the future of digital finance.

LIQUID CAPITAL & SETTLEMENT PARTNER

UTexo (RGB Member)

● \$7.5M ROUND LED BY TETHER

Strategic alliance with UTEXO following their **Tether-led \$7.5M round** to pioneer native USDT on **Bitcoin**. This partnership secures the **deep, critical liquidity** required for DIBA's massive scale and success.

INFRASTRUCTURE PARTNER

Hut8 Mining (NASDAQ: HUT)

Joint venture to build Carbonado → the decentralized data availability layer for **Bitcoin** assets. Leveraging Hut8's mighty mining footprint.

PROTOCOL GOVERNANCE

RGB Association

Founding member and core contributor. Direct influence on the protocol standard powering secure **Bitcoin** smart contracts.

LEAD INVESTOR

Draper Associates

First cheque from Tim Draper. Renowned for early bets on Tesla, Skype, and **Bitcoin**. Strategic alignment on institutional infrastructure.

SOVEREIGN PIPELINE

Government Pilots

Active MOUs and API sandboxes with sovereign entities to build **Bitcoin**-native asset registries and digital asset architecture.

Market Size

The tokenization is the largest capital markets opportunity of the next decade.

Addressable Verticals

-  **Government Securities →**
Treasury bonds, sovereign debt
-  **Private Credit →**
CLOs, CDOs, corporate loans
-  **Real Estate →**
Fractional ownership, mortgage-backed
-  **Commodities →**
Gold, oil, agricultural products
-  **Private Equity →**
Fund units, LP interests, liquidity

EXPLORING

SOURCE MATERIAL

BCG, ADDX, BlackRock (2024-2025). BIS Innovation Hub.

Revenue Model

Multiple revenue streams across the capital markets value chain.

VOLUME & LIQUIDITY

Transaction Fees

- Multi-revenue engine: BitMask micro transaction fees plus 0.1–5% marketplace exchange fees.
- Volume natively scales with **USDT settlement** (boosted by the \$7.5M UTexo ecosystem raise) and the expansion of onchain assets.

RECURRING / ENTERPRISE

SDK Licensing

- Annual SaaS licensing for B2B white label integrations.
- This predictable revenue stream scales rapidly as mid market banks adopt our infrastructure.

HIGH-VALUE

Sovereign Contracts

- Multi-year government infrastructure contracts.
- For national digital asset registry deployment and global maintenance.

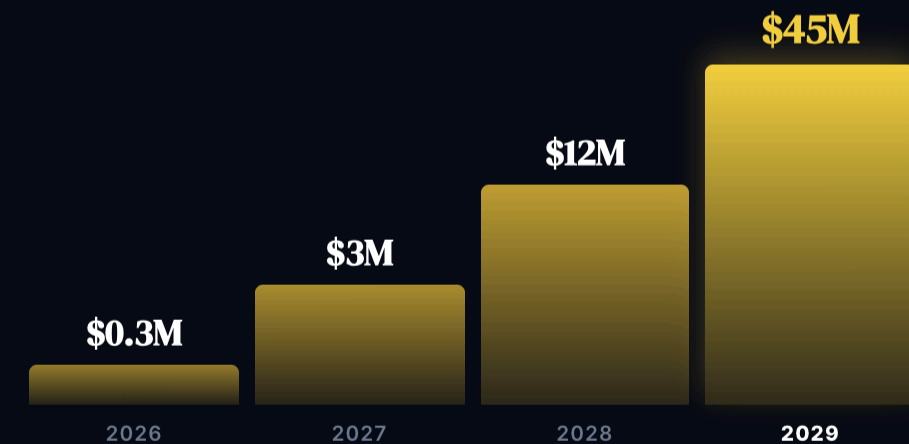

ECOSYSTEM

Issuance Fees

- One-time fee for primary asset issuance on DIBA.
- Includes premium compliance tooling and secure custody setup.

Projected Revenue Mix

EST. GROSS ARR

Go-to-Market Flywheel

A progressive engagement strategy: Consumer → Enterprise → Sovereign.

PHASE 1 → B2C

Consumer Wallet & Marketplace

BitMask PWA and DIBA Marketplace drive organic adoption. Users custody and trade their own assets. Network effects build the distribution moat.

PHASE 2 → B2B

Enterprise SDK

White-label SDK for asset managers and banks. High-margin revenue via licensing, integration, and transaction fees.

PHASE 3 → B2G

Sovereign Infra

Securing MOUs and API sandbox deployments for national digital asset registries. Highly secure, multi-year contracts with central banks.

Flywheel Logic

Each phase feeds the next: B2C users prove demand → B2B clients adopt proven infrastructure → B2G partners require established enterprise track records.

Team & Core Contributors

Built by pioneers in Bitcoin smart contracts and institutional infrastructure.

LEADERSHIP

Gideon Nweze

FOUNDER & CEO

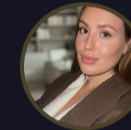

Gideon is an experienced founder and an early core contributor to the RGB protocol. He applies first-principles engineering to solve the trilemma of scalable, confidential, and programmable Bitcoin.

Stanley Ibe Arua

CHIEF TECHNOLOGY OFFICER

Stanley is a 100x full-stack engineer with 11+ years building high-availability banking systems and central bank infrastructure. Bridges TradFi compliance requirements with trustless cryptographic systems.

Anastasiia Ilicheva

VP, GROWTH

Anastasiia is a marketing and partnership genius. She drives strategic international market positioning and sovereign partnerships. Translating deep technical capabilities into institutional value propositions that close.
